Property Detailed Report — Orion Electronics Manufacturing Inc.

450 Industrial Parkway, Austin, TX 78744, USA

Executive summary

This report provides a comprehensive property overview for underwriting Commercial Property coverage for Orion Electronics Manufacturing Inc. The report summarizes property attributes, operations, critical systems, exposures, recent loss history, and recommended underwriting items based on information provided by the broker and insured.

Property identification

- Location: 450 Industrial Parkway, Austin, TX 78744, USA
- Parcel size: 12 acres (secure industrial campus with controlled-entry perimeter fencing)
- Building area: 200,000 sq ft
- Year constructed: 2015
- Major renovation: 2021 (assembly line modernization, HVAC upgrades)
- Number of floors: 2
- Class code: 0414
- Number of production lines: 5

Property description & construction

- Primary construction: steel frame with insulated metal panel exterior walls.
- Floor construction: reinforced concrete slab (reinforced concrete flooring); machine pits present.
- Roof: insulated metal roof system (2021 upgrades).
- Basements / lower levels: none; machine pits present.
- Site improvements: loading docks, truck circulation lanes, secured perimeter fencing, controlled-entry access.
- Accessibility: primary truck ingress/egress via Industrial Parkway; site designed for continuous high-volume production flows.

Occupancy & operations

Primary use: high-volume electronics assembly & testing facility.
Interior spaces: precision-controlled assembly areas, testing labs, equipment bays, and administrative offices.
Revenue drivers: contract manufacturing, OEM component fabrication.

Average annual operational capacity: 82%.
Seasonal variation: minimal; continuous production cycle.

Schedule of values — insured values (summary)

- Buildings & structural improvements: $120,000,000
- Contents / machinery & equipment: $30,000,000
- Total insured value (TIV): $150,000,000

High-level itemization (for underwriting reference)

- Buildings & structural improvements: $120,000,000
- Contents, machinery & equipment: $30,000,000

Coverage summary

The proposed coverage structure is aligned with the facility's asset distribution and operational dependencies, ensuring that both the building and critical machinery are adequately protected. The majority of the Total Insured Value is concentrated in the buildings and structural improvements at $120,000,000, reflecting the significance of the physical plant to ongoing production. Replacement Cost valuation is appropriate given the modern construction features, including the steel frame design, reinforced concrete slab, and upgraded insulated metal roof system. These characteristics support a coverage approach that prioritizes rapid rebuilding capability in the event of a major loss, limiting time element exposure and reducing the likelihood of prolonged operational disruption. Additional coverages should reflect the site's reliance on specialized machinery and precision controlled production environments, supported by $30,000,000 in contents, machinery, and equipment values. Critical systems—such as the precision HVAC upgrade from 2021, dual feed electrical supply with UPS backup, and clean agent fire suppression systems—further justify equipment breakdown, electrical injury, and service interruption extensions. Given the facility's continuous production model and sensitivity to time element losses, business interruption coverage with consideration for extra expense, utility service interruption, and contingent time element (due to key semiconductor suppliers) is essential to maintain financial resilience after a covered event.

Critical building systems

- HVAC: precision climate control system; 2021 upgrade.
- Electrical: dual-feed power supply; backup UPS systems.
- Emergency power: diesel generator powering essential production zones.
- Fire protection: FM-approved suppression system; clean agent systems in sensitive areas.

- Plumbing: industrial-grade water systems for cooling.
- Elevators: 1 freight elevator.

Security & monitoring

- Security staff: 24/7 on-site security.
- Electronic access: badge-based access for all employees.
- CCTV: full-facility coverage with monitored control room.

Utilities & third-party dependencies (contingent BI relevance)

- Power provider: Austin Energy.
- Water & sewer: municipal.
- Primary ISP: TechFiber Communications.
- Redundant ISP: LineLayer Networks.
- Critical suppliers: semiconductor component suppliers, packaging vendors.

Maintenance, inspections & risk controls

- Preventive maintenance: digital CMMS-managed schedule.
- Life-safety testing: quarterly system tests.
- Vendor controls: mandatory insurance requirements.
- Business continuity: full BCP with off-site data replication.
- Staff training: machine safety, hazard communication, evacuation drills.

Recent loss history (time-element & property)

- 2024: minor electrical room short circuit — downtime 2 days; approx. $180,000.
- 2023: forklift collision damaging shelving; approx. $45,000.

Exposures & underwriting considerations

- Time-element sensitivity due to reliance on continuous production.
- Supply chain dependencies for specialized components.
- Utility interruption exposure due to high power demand.
- Fire and equipment breakdown critical exposures.

Broker & property contacts

- Broker: James Carter — Senior Commercial Broker, Armstrong and Company
- Email: j.carter@armcomp.com
- Phone: +1 (555) 781-2203
- Property contact: Laura Chen — Plant Manager
- Email: l.chen@orionelectronics.com
